INTEGRATION

Toll system integration.
User-tested for quality.

We proudly serve some of the most prominent toll-collection authorities in the United States. Our approach to integration welcomes and includes user collaboration throughout the design, development, and testing phases. We also rely on consistent and frequent user testing and research—a vital step in every Quarterhill project. This helps ensure our clients and consultants can manage risks, especially in tight timelines or large-scale development and integration projects.

OPERATIONS AND MAINTENANCE

Expert field operations and
maintenance. Maximum
performance and ROI.

Whether onsite or remote—our team of experts handles maintenance service requests and field operations, all supported by our enterprise-grade IT service and asset management. Our system provides intelligent KPIs and automated lane performance analysis. Our team excels in maintenance planning, including corrective, preventive, and predictive measures, and developing comprehensive disaster recovery strategies to mitigate revenue-related risks and resume operations quickly.

DID YOU KNOW?

We offer full-service toll
solutions, expert service
and support.

Toll lanes, hosted computer systems, customer service centers, and violation processing—our solutions have consistently demonstrated reliability and precision in demanding toll environments. We deploy highly skilled and experienced teams to support our solutions.

STRATEGIC STAFFING SOLUTIONS

Optimized workforce
operations. Powered by
data and insights.

Our metric-driven approach aligns workforce management strategies with your business goals and brand to ensure optimal staffing and efficient operations. Continuous monitoring of day-to-day activities allows us to forecast accurately, track volume trends, and determine personnel requirements for call center and retail storefront operations, image review services, audit and financial reconciliation, violation processing, and collections.

OPERATIONAL TOOLS

Advanced IT management.
Seamless operations and
performance.

We provide enterprise-level platforms that blend predictive functionalities with automated lane performance audits. We offer monitoring tools which leverage open-source, big-data infrastructure designed for tolling, intelligent transportation services, and multi-service mobility applications. Customizable dashboards and reporting allow you to oversee roadway devices and software availability and performance while adhering to defined service levels.
